

⚡ QuantMesh x402 — 1-Page Quick Summary (Hinglish)

AlgoVerse 2026 Hackathon (PS0404) | 60-Second Teammate Cheat Sheet

💡 1. Ek Line Me Kya Hai?

QuantMesh x402 ek **Decentralized AI Market Signal Router** hai jo Algorand par chalta hai. Apan ne **\$200/month subscription khatam kar di** — user har signal ke liye sirf **\$0.007 (₹0.60 paise)** pay karta hai!

🔒 2. Sabse Bada Killer Feature: Zero-Fee Guarantee

- **Pre-Execution Gating:** User ka wallet tabhi pop-up hoga jab saare 4 AI bots 100% success respond karenge.
- **Fail-Safe:** Agar piche se ek bhi bot down hua, toh server **HTTP 502** dega aur **₹1 bhi nahi katega!**

🧠 3. Charo AI Sub-Agents (Dimag Kahan Hai?)

1. 🧑 **Worker A (Sentiment):** Financial news ko **FinBERT NLP (HuggingFace Router)** se analyze karke sentiment score nikalta hai.
2. 🐳 **Worker B (Whale Flow):** **CoinGecko Live API** se volume & market cap track karke Whale Net Inflow/Outflow batata hai.
3. 📊 **Worker C (Technical Engine):** Live OHLC candles parse karke **RSI, SMA 7/20 Golden/Death Cross, EMA**, aur **MACD** calculate karta hai.
4. 🧮 **Worker D (Fusion Engine):** Math formula se final score generate karta hai ($30\% \text{ Sentiment} + 35\% \text{ Whale} + 35\% \text{ TA}$).

⚙️ 4. Kaam Kaise Karta Hai? (4-Step Flow)

[Select Token: ALGO/BTC] → [Click 'Execute Strategy'] → [4 Bots Run in 25ms]
[SHA-256 Box Storage Receipt] ← [Lute Wallet Signs \$0.007] ← (All Passed OK)

🔒 5. On-Chain Attestation & Proof

- Every signal creates a **SHA-256 cryptographic digest** (`sha256(token:score:verdict:txId:timestamp)`).
- Our **PyTeal ARC-4 Smart Contract** writes this hash to **Algorand Box Storage** for permanent on-chain auditability.

📊 6. Live Status & Mainnet Readiness

- **Live Server:** AWS EC2 (<https://api.dhanrajgupta.xyz>), 4 workers online with **17ms-29ms latency**.

- **Mainnet Switch:** Flip network flag to [algorand:mainnet](#) and USDC ASA ID to [315667040](#). Zero code logic changes needed!
